托福写作范文：应该如何照顾家庭成员

Do you agree or disagree with the following statement? People can take care of their family members better when they live in big cities than in the countryside.

Family members provide us with the sense of belonging and always stand firmly behind us.　Some people are arguing that countryside is an ideal place for people to take care their family members, for the environment there is much more suitable for health. I disagree. As for me, big cities are the right place for people to look after their family.

Firstly, living in big cities makes the medical bills and educational expenses affordable for people. It is because in big cities, working opportunities are much more than those in the countryside. Besides, the payment in big cities is always decent.　It is usually two or three times higher than that in towns and villages. That guarantees the basic needs and living conditions of family members.

Secondly, seniors can be better taken care of when living in big cities. It is because there are better medical services in big cities as aged people are vulnerable to diseases. In this case, we had better live near a hospital or an infirmary. When an emergency happens, such as heart attack, we no longer have to drive a long distance very fast to a town or a city for seeing a doctor.

Thirdly, children can be better educated in big cities. The reasons are twofold. For one thing, many top high schools and universities are located in big cities. For instance, in China, the most influential universities, like Tsinghua University, can be only found in Beijing. For another thing, zoos, parks, museums and libraries are easily accessible if living in big cities. We can also enjoy our reading time with children in city libraries and watch a hilarious pets show in the zoo.

All in all, due to the greater chance of good material life, better medical treatment that senior citizens could receive and the wonderful education for children, living in big cities is the absolutely right choice for people to tend their family.
